DETAILED ACTION

Allowable Subject Matter

The following is an examiner's statement of reasons for allowance: the prior art of record fails to teach, in combination with the remaining claim limitations: "at least portions of cladding of the optical fiber that are in contact with each other are fused together thereby forming a substantially integral optical fiber sensing loop" found in claim 1; "cladding of the optical fiber in the plurality of concentric cylindrical layers and cladding of the optical fiber in the plurality of turns are fused to one another at points of mutual contact" found in claim 5; "fusing the optical fiber so that at least portions of cladding of the optical fiber that are in contact with one another are fused together thereby forming a substantially integral optical fiber sensing loop" found in claim 8; and "fusing the cladding of the successive turns of the optical fiber to one another at points of mutual contact" as found in claim 12.

The prior art of record provides for a potting or bonding material between the fibers and fiber layers, or an adhesive is coated on the fibers or fiber layers to bind the coil. As to whether potting, bonding, or and adhesive would be functionally equivalent to fusing the claddings as claimed, applicant provides teachings that fusing the cladding would not have been functionally equivalent to potting, bonding, or and adhesive at paragraph [0013] of the specification.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
